

Final Assignment

November 23, 2022

Extracting and Visualizing Stock Data

Description

Extracting essential data from a dataset and displaying it is a necessary part of data science; therefore individuals can make correct decisions based on the data. In this assignment, you will extract some stock data, you will then display this data in a graph.

Table of Contents

- Define a Function that Makes a Graph
- Question 1: Use yfinance to Extract Stock Data
- Question 2: Use Webscraping to Extract Tesla Revenue Data
- Question 3: Use yfinance to Extract Stock Data
- Question 4: Use Webscraping to Extract GME Revenue Data
- Question 5: Plot Tesla Stock Graph
- Question 6: Plot GameStop Stock Graph

Estimated Time Needed: 30 min

```
[3]: !pip install yfinance==0.1.67
!mamba install bs4==4.10.0 -y
!pip install nbformat==4.2.0
```

0.1 Define Graphing Function

In this section, we define the function `make_graph`. You don't have to know how the function works, you should only care about the inputs. It takes a dataframe with stock data (dataframe must contain Date and Close columns), a dataframe with revenue data (dataframe must contain Date and Revenue columns), and the name of the stock.

```
[6]: def make_graph(stock_data, revenue_data, stock):
    fig = make_subplots(rows=2, cols=1, shared_xaxes=True,
        ↳ subplot_titles=("Historical Share Price", "Historical Revenue"),
        ↳ vertical_spacing = .3)
    stock_data_specific = stock_data[stock_data.Date <= '2021--06-14']
    revenue_data_specific = revenue_data[revenue_data.Date <= '2021-04-30']
    fig.add_trace(go.Scatter(x=pd.to_datetime(stock_data_specific.Date,
        ↳ infer_datetime_format=True), y=stock_data_specific.Close.astype("float"),
        ↳ name="Share Price"), row=1, col=1)
    fig.add_trace(go.Scatter(x=pd.to_datetime(revenue_data_specific.Date,
        ↳ infer_datetime_format=True), y=revenue_data_specific.Revenue.
        ↳ astype("float"), name="Revenue"), row=2, col=1)
    fig.update_xaxes(title_text="Date", row=1, col=1)
    fig.update_xaxes(title_text="Date", row=2, col=1)
    fig.update_yaxes(title_text="Price ($US)", row=1, col=1)
    fig.update_yaxes(title_text="Revenue ($US Millions)", row=2, col=1)
    fig.update_layout(showlegend=False,
        height=900,
        title=stock,
        xaxis_rangeslider_visible=True)
    fig.show()
```

0.2 Question 1: Use yfinance to Extract Stock Data

Using the `Ticker` function enter the ticker symbol of the stock we want to extract data on to create a ticker object. The stock is Tesla and its ticker symbol is TSLA.

```
[7]: Tesla= yf.Ticker("TSLA")
```

Using the ticker object and the function `history` extract stock information and save it in a dataframe named `tesla_data`. Set the `period` parameter to `max` so we get information for the maximum amount of time.

```
[8]: tesla_data=pd.DataFrame(Tesla.history(period="max"))
tesla_data.head()
```

```
[8]:
```

```

Reset the index using the `reset_index(inplace=True)` function on the `tesla_data` DataFrame and display the first five rows of the `tesla_data` dataframe using the `head` function. Take a screenshot of the results and code from the beginning of Question 1 to the results below.

```
[9]: tesla_data.reset_index(inplace=True)
tesla_data.head(5)
```

```
[9]:
```

0.3 Question 2: Use Webscraping to Extract Tesla Revenue Data

Use the `requests` library to download the webpage <https://www.macrotrends.net/stocks/charts/TSLA/tesla/revenue>. Save the text of the response as a variable named `html_data`.

```
[10]: url="https://www.macrotrends.net/stocks/charts/TSLA/tesla/revenue"
html_data=requests.get(url).text
```

Parse the html data using `beautiful_soup`.

```
[11]: from bs4 import BeautifulSoup
      soup=BeautifulSoup(html_data)
```

Using `BeautifulSoup` or the `read_html` function extract the table with Tesla Quarterly Revenue and store it into a dataframe named `tesla_revenue`. The dataframe should have columns `Date` and `Revenue`.

[Click here](#) if you need help locating the table

Below is the code to isolate the table, you will now need to loop through the rows and columns

```
soup.find_all("tbody")[1]
```

If you want to use the `read_html` function the table is located at index 1

```
[14]: tesla_revenue = pd.DataFrame(columns=['Date', 'Revenue'])

      for table in soup.find_all('table'):

          if ('Tesla Quarterly Revenue' in table.find('th').text):
              rows = table.find_all('tr')

              for row in rows:
                  col = row.find_all('td')

                  if col != []:
                      date = col[0].text
                      revenue = col[1].text.replace(',','').replace('$','')

                      tesla_revenue = tesla_revenue.append({"Date":date, "Revenue":
↪revenue}, ignore_index=True)
                      tesla_revenue
```

Execute the following line to remove the comma and dollar sign from the `Revenue` column.

```
[15]: revenue = col[1].text.replace("$", "").replace(",", "")
```

Execute the following lines to remove an null or empty strings in the `Revenue` column.

```
[16]: tesla_revenue.dropna(inplace=True)

      tesla_revenue = tesla_revenue[tesla_revenue['Revenue'] != ""]
```

Display the last 5 row of the `tesla_revenue` dataframe using the `tail` function. Take a screenshot of the results.

```
[17]: tesla_revenue.tail()
```

```
[17]:      Date Revenue
48  2010-09-30      31
49  2010-06-30      28
50  2010-03-31      21
52  2009-09-30      46
53  2009-06-30      27
```

0.4 Question 3: Use yfinance to Extract Stock Data

Using the `Ticker` function enter the ticker symbol of the stock we want to extract data on to create a ticker object. The stock is GameStop and its ticker symbol is `GME`.

```
[19]: import yfinance as yf
gameStop=yf.Ticker("GME")
```

Using the ticker object and the function `history` extract stock information and save it in a dataframe named `gme_data`. Set the `period` parameter to `max` so we get information for the maximum amount of time.

```
[54]: gme_data=pd.DataFrame(gameStop.history(period="max"))
```

Reset the index using the `reset_index(inplace=True)` function on the `gme_data` DataFrame and display the first five rows of the `gme_data` dataframe using the `head` function. Take a screenshot of the results and code from the beginning of Question 3 to the results below.

```
[55]: gme_data.reset_index(inplace=True)
gme_data.head()
```

```
[55]:      Date      Open      High      Low      Close      Volume  Dividends  \
0  2002-02-13  1.620128  1.693350  1.603296  1.691666   76216000      0.0
1  2002-02-14  1.712707  1.716074  1.670626  1.683250   11021600      0.0
2  2002-02-15  1.683250  1.687458  1.658002  1.674834    8389600      0.0
3  2002-02-19  1.666418  1.666418  1.578047  1.607504    7410400      0.0
4  2002-02-20  1.615920  1.662210  1.603296  1.662210    6892800      0.0
```

```

0.5 Question 4: Use Webscraping to Extract GME Revenue Data

Use the `requests` library to download the webpage <https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/IBMDeveloperSkillsNetwork-PY0220EN->

SkillsNetwork/labs/project/stock.html. Save the text of the response as a variable named `html_data`.

```
[56]: Url="https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/  
      ↪IBMDeveloperSkillsNetwork-PY0220EN-SkillsNetwork/labs/project/stock.html."  
      html_data=requests.get(Url).text
```

Parse the html data using `beautiful_soup`.

```
[57]: soup=BeautifulSoup(html_data)
```

Using `BeautifulSoup` or the `read_html` function extract the table with **GameStop Quarterly Revenue** and store it into a dataframe named `gme_revenue`. The dataframe should have columns `Date` and `Revenue`. Make sure the comma and dollar sign is removed from the `Revenue` column using a method similar to what you did in Question 2.

[Click here](#) if you need help locating the table

Below is the code to isolate the table, you will now need to loop through the rows and columns

```
soup.find_all("tbody")[1]
```

If you want to use the `read_html` function the table is located at index 1

```
[58]: gme_revenue = pd.DataFrame(columns=['Date', 'Revenue'])  
  
      for table in soup.find_all('table'):  
  
          if ('GameStop Quarterly Revenue' in table.find('th').text):  
              rows = table.find_all('tr')  
  
              for row in rows:  
                  col = row.find_all('td')  
  
                  if col != []:  
                      date = col[0].text  
                      revenue = col[1].text.replace(',','').replace('$','')  
  
                      gme_revenue = gme_revenue.append({"Date":date, "Revenue":  
      ↪revenue}, ignore_index=True)
```

Display the last five rows of the `gme_revenue` dataframe using the `tail` function. Take a screenshot of the results.

```
[59]: gme_revenue.tail(5)
```

```
[59]: Empty DataFrame
      Columns: [Date, Revenue]
      Index: []
```

0.6 Question 5: Plot Tesla Stock Graph

Use the `make_graph` function to graph the Tesla Stock Data, also provide a title for the graph. The structure to call the `make_graph` function is `make_graph(tesla_data, tesla_revenue, 'Tesla')`. Note the graph will only show data upto June 2021.

```
make_graph(tesla_data[['Date','Close']], tesla_revenue, 'Tesla')
```

0.7 Question 6: Plot GameStop Stock Graph

Use the `make_graph` function to graph the GameStop Stock Data, also provide a title for the graph. The structure to call the `make_graph` function is `make_graph(gme_data, gme_revenue, 'GameStop')`. Note the graph will only show data upto June 2021.

```
[48]: #make_graph(gme_data[['Date', 'Close']], gme_revenue, 'GameStop')
      make_graph(gme_data[['Date', 'Close']], gme_revenue, 'GameStop')
```

GameStop
